HORIZON NORTH LOGISTICS INC. ANNOUNCES RECENT CONTRACT AWARD

Horizon North Logistics Inc. ("Horizon North" or the "Corporation") (TSX – HNL) announced today that its Industrial division has recently been awarded a new camp service contract.

Horizon North has been awarded a contract for the provision of camp solutions in the Wapiti area near Grande Prairie, Alberta. Horizon North will be supplying and installing a 390 person camp as well as providing ongoing catering and hospitality services over an initial 20 month term.

Revenue over the initial term of the contract is expected to be a minimum of \$22 million based on committed occupancy and utilization levels. The facility will be comprised of existing fleet assets and an additional \$1.2 million of newly manufactured equipment. The additional capital is included in the Corporation's 2017 capital budget.

"Our fully integrated approach to handling the entire process from permitting through to occupancy, on a compressed timeline, demonstrates our logistical and execution capabilities," said Rod Graham, President and CEO of Horizon North. "Through commitment and

understanding our customers' needs we are able to provide them with exceptional value and support. We are pleased with the award of the initial phase of this multi-phased project, with the option for future work."

About Horizon North

Horizon North is a publicly listed corporation (TSX: HNL.TO) providing a full range of industrial, commercial, and residential products and services. Our Industrial division supplies workforce accommodations, camp management services, access solutions, maintenance and utilities. Our Modular Construction division integrates modern design concepts and technology with state of the art, off-site manufacturing processes; producing high quality building solutions for commercial and residential offerings including offices, hotels, and retail buildings, as well as distinctive single detached dwellings and multi-family residential structures. As a result of our diverse product and service offerings, Horizon North is uniquely positioned to meet the needs of our customers in numerous sectors, anywhere in Canada.

Additional information related to Horizon North, including the Corporation's annual information form, news releases, financial statements and MD&A are

available on the Corporation's website at www.horizonnorth.ca and on SEDAR at www.sedar.com

CNL SEEKS INPUT ON SMALL MODULAR REACTOR TECHNOLOGY

Today, Canadian Nuclear Laboratories (CNL) begins a discussion around Small Modular Reactor (SMRs) technology in Canada, and the role that Canadian Nuclear Laboratories can play in bringing this technology to market, by launching a Request for Expressions of Interest on SMRs.

Over the past decade, small modular reactors (SMRs) have increasingly been recognized as a potential alternative to large-scale nuclear reactors. This clean energy technology holds opportunities for Canada, particularly for remote communities or industrial sites. SMRs may offer several advantages over traditional technologies, notably: the ability to purchase and construct in a modular way, decreasing up-front capital costs through simpler, less complex plants, and a reduced staff complement. Designs can also bring greater efficiency and systems which are inherently safe. In addition to electricity generation, SMRs could be integrated in overall energy plans with applications as varied as district heating,

co-generation, energy storage, desalination, or hydrogen production.

CNL is seeking input from SMR technology developers, potential end users, and any other interested parties and stakeholders, including potential host communities, unions, the nuclear supply chain, and research and academic institutions. This Request for Expressions of Interest aims to build an understanding of the existing capabilities, technology gaps, needs and requirements both from technology developers and other stakeholders, and overall market interest, so that CNL can position itself as a key partner to the development and deployment of SMRs.

The Request for Expressions of Interest is open from June 1 to July 31; visit www.cnl.ca/SMR to learn more or to provide your response.

Canadian Nuclear Laboratories is advancing science and technology for a clean and secure world. Building on decades of experience in supporting and deploying numerous prototype, demonstration, research, and power reactors, CNL is well-positioned to support the development and deployment of SMRs, including hosting a demonstration facility at one of its locations.

selection and licensing process for the first demonstration or prototype reactor later this year. At this preliminary stage, these activities will be technology neutral, and inclusive of all potential technologies. We need to hear from the broader SMR development community, to ensure that their needs are being captured."

Kathryn McCarthy, Vice-President, Research & Development, Canadian Nuclear Laboratories

"We really consider this as an open discussion with industry and the public, on how or where they see SMRs fitting within the larger energy picture in this country. This is an opportunity for anyone to share their views, raise their questions and suggest potential applications for this technology."

Mark Lesinski, President & CEO, Canadian Nuclear Laboratories

"Atomic Energy of Canada Limited is excited about the possibilities that Small Modular Reactors (SMRs) may bring to Canada. CNL's ambitious program in nuclear science and technology, including its goal to be the host of the first demonstration SMR in Canada, will enable it to become a world-class, nuclear science and technology organization, with important benefits for Canada's innovation, clean economy, and green infrastructure goals."

Richard Sexton, President and CEO, Atomic Energy of Canada Limited

"Small modular reactors have great potential as an emerging technology that could supply low-carbon energy for a range of users, including remote

communities, mining operations and the oil and gas industry. The discussion that CNL is initiating will help to inform our ongoing Generation Energy consultation, which invites Canadians from all walks of life to share their ideas and participate in helping define Canada's energy future."

Jim Carr, Canada's Minister of Natural Resources
About CNL

Canadian Nuclear Laboratories is a world leader in nuclear science and technology offering unique capabilities and solutions across a wide range of industries. Actively involved with industry-driven research and development in nuclear, transportation, clean technology, energy, defence, security and life sciences, we provide solutions to keep these sectors competitive internationally.

With ongoing investments in new facilities and a focused mandate, Canadian Nuclear Laboratories is well positioned for the future. A new performance standard reinforced with a strong safety culture underscores every activity.

middle-class jobs in communities across our country. Many families depend on the industry's continued success and our government continues to fight vigorously to defend the interests of Canadian softwood lumber producers.

Today, the Honourable Jim Carr, Canada's Minister of Natural Resources, the Honourable Chrystia Freeland, Minister of Foreign Affairs, and the Honourable François-Philippe Champagne, Minister of International Trade, announced \$867 million in measures to support forest industry workers and communities affected by U.S. measures targeting softwood lumber.

This includes federal loans and loan guarantees to complement provincial efforts for viable Canadian companies. Export Development Canada (EDC) will make commercial financing and risk management solutions — including loans and

loan guarantees — valued at up to \$500 million available to assist viable forestry companies. The Business Development Bank of Canada (BDC) will make \$105 million in commercial financing available to help eligible forestry companies in the short and medium term. Funding for further loan guarantees may be considered by the Government in the future to address changing market conditions.

The Government's support also includes investments to diversify forest products and markets, to increase the industry's resilience to these unfair trade actions and promote its long-term health.

Additional measures announced today include more than \$260 million in new funding to:

support efforts to expand overseas markets and promote the diversification of Canadian wood products beyond those targeted by U.S. duties on softwood lumber;

help Indigenous communities and organizations improve the performance of their forest sector initiatives;

provide a temporary extension of the maximum period for Work-Sharing agreements from 38 to 76 weeks in order to reduce layoffs; and

expand supports to help affected workers upgrade their skills and transition to new opportunities.

Today's announcement demonstrates the Government's commitment to take quick action and its overarching strategy to target new markets around the globe in a concerted effort to enhance trade and market diversification for Canadian wood and wood products as part of the clean-growth economy. Federal Cabinet ministers have recently travelled to the U.K., continental Europe and Asia, including China, to promote these measures and Minister Carr will travel to China with a delegation of Canadian forest industry representatives in early June to build on that success.

These actions defend the interests of Canadians against the U.S. Department of Commerce's imposition of countervailing duties on Canadian softwood lumber and build upon recent efforts made to ensure the continued growth and vibrancy of this sector.

The Government of Canada continues to forcefully press our American counterparts to rescind this unfair and unwarranted trade action while remaining confident that a negotiated settlement is not only possible, but in the best interests of both countries.

Quick Facts

In 2016, the forest industry accounted for \$22 billion of Canada's GDP.

In 2015, Canada's forest industry directly employed more than 200,000 Canadians, including 9,500 jobs in Indigenous communities.

More than 170 rural municipalities have a significant portion of their income generated by the forest sector, and there are over 600 mills producing softwood lumber in Canada.

Q u o t e s

"This action plan delivers on our pledge to take swift and reasonable action to defend our softwood lumber industry and charts a stronger future for the workers, families and communities that depend on it. We are prepared to take further action, including additional loan guarantees, to address changing market conditions."

08004448221 (toll free dial in number in Argentina)

About Madalena Energy
Madalena is an independent, Canadian Argentine focused upstream oil and gas company with operations in four provinces of Argentina where it is primarily focused on the delineation of unconventional oil and gas resources. The Company is implementing horizontal drilling and completions technology to develop both its conventional and resource plays.

Madalena trades on the TSX Venture Exchange under the

symbol MVN and on the OTCQX under the symbol MDLNF.

Neither the TSX Venture Exchange nor its Regulation Service Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

Preferred Equity Ltd. (TSX: AZP.PR.A, AZP.PR.B and AZP.PR.C) (the "Corporation"), a subsidiary of Atlantic Power, announced the dividend rate on the Corporation's outstanding Cumulative Floating Rate Preferred Shares, Series 3 (AZP.PR.C) (the "Series 3 Shares") will be 4.70%, which will be payable September 29, 2017.

The Series 3 Shares dividend rate was calculated on May 31, 2017 to be 4.70%, representing the sum of the Canadian Government 90-day Treasury Bill yield (using the three-month average result of 0.52%) plus 4.18%.

Tax Information for Shareholders

The Corporation designates the dividend on each of the Series 1 Shares, Series 2 Shares and Series 3 Shares to be an "eligible dividend" pursuant to subsection 89(14) of the Income Tax Act (Canada) and its equivalent in any of the provinces and territories of Canada. U.S. individual or other non-corporate taxpayers should be eligible for the reduced rate of tax currently applicable to "qualified dividends" provided that the investor meets the holding period and any other requirements. Taxpayers should always seek their own independent qualified professionals for advice regarding the tax consequences of purchasing or owning preferred shares of the Corporation.

About Atlantic Power Preferred Equity Ltd.

The Corporation is incorporated under the laws of the Province of Alberta and is an indirect, wholly-owned subsidiary of Atlantic Power. The Corporation holds, directly or indirectly, Atlantic Power's business and power generation and other assets in British Columbia and the United States.

About Atlantic Power

Atlantic Power owns and operates a diverse fleet of twenty-three power generation assets across nine states in the United States and two provinces in Canada. The Company's power generation projects sell electricity to utilities and other large commercial customers largely under long-term PPAs, which seek to minimize exposure to changes in commodity prices. The aggregate gross electric generation capacity of this portfolio is approximately 2,138 megawatts (MW), and the Company's aggregate net ownership interest is approximately 1,500 MW. Nineteen of the projects are currently operational, totaling 1,975 MW on a gross capacity basis and 1,337 MW on a net ownership basis. The remaining four projects, all in Ontario,

are not operational, three due to revised contractual arrangements with the off-taker and the other, Tunis, has a forward-starting 15-year contractual agreement that will commence between November 2017 and June 2019.

Atlantic Power's shares trade on the New York Stock Exchange under the symbol AT and on the Toronto Stock Exchange under the symbol ATP. For more information, please visit the Company's website at www.atlanticpower.com or contact:

DOBLE ENGINEERING COMPANY ANNOUNCES PROGRAM TO COMPLY WITH NERC STANDARD TPL-007-1

Doble Engineering Company, a subsidiary of ESCO Technologies Inc. (NYSE: ESE), today announced the release of its Geomagnetic Disturbance Risk Mitigation Services. The new program is designed to help customers comply with the North American Electric Reliability Corporation (NERC) Standard TPL-007-1 and determine if their transformers are susceptible to geomagnetically-induced currents (GIC) triggered by solar storms. Doble's program helps applicable transmission and generation owners conduct initial and ongoing assessments of the potential impact of severe geomagnetic disturbances and develop targeted mitigation plans.

"Geomagnetic disturbances (GMDs) caused by solar storms can create problems for the power grid by inducing currents in long conductors near the Earth's surface," said Dom Corsi, senior transformer engineer at Doble. "This can destabilize the electric system and potentially damage transformers. Adequately preparing for these events is required by NERC regulation and is essential to avoid costly damage to power equipment and disrupted power supply."

How does space weather impact transformers?

GMDs occur naturally and cause quasi-DC current flow through wye-grounded transformer

windings. While the result is not always catastrophic, certain factors influence the degree of risk to the grid and power system equipment, like geomagnetic latitude, ground resistivity, network topology, storm duration, loading and equipment design.

Depending on the transformer, a given GMD event may impact your equipment differently. The key is to know which equipment presents the greatest risk and understand how to best prepare should the so-called 'perfect storm' of space weather hit.

Some of the potential impacts of GIC flow to transformers include: increased current harmonics; increased reactive power absorption; hot spot heating of transformer windings due to harmonics and stray flux; hot spot heating of non-current carrying transformer metallic members due to stray flux; increased vibration and noise level; and system voltage instability.

Meeting regulatory requirements

The threats posed by space weather have become a focal point for regulatory bodies. Protecting the bulk electric system from the impact of GMD events is a motivation of the new NERC standard TPL-007-1. To adhere to the standard, utilities must conduct both initial and ongoing assessments of the potential impact

of a "1-in-100-year" benchmark GMD event on their equipment and the bulk power system as a whole including:

GIC Disturbance Vulnerability Assessment for the system's ability to withstand a benchmark GMD event without causing a wide area blackout, voltage collapse or transformer damage.

Transformer Thermal Impact Assessment to ensure that all high-side, wye-grounded >200kV transformers can withstand thermal transient effects associated with a benchmark GMD event.

The standard also requires corrective action planning to protect against instability and cascading failures.

To prepare for these kinds of issues, Doble's Geomagnetic Disturbance Risk Mitigation Services start with an engineering study to establish power transformer capabilities while under GIC, according to the IEEE C57.163-2015 Guide.

"The industry is taking this threat seriously, and we are seeing independent system operators setting quickly approaching compliance deadlines for receiving the first set of information from their generation and transmission owners," said Paul Griffin, vice president of consulting and testing services at Doble. "Our Geomagnetic Disturbance Risk Mitigation Services

will help them meet regulatory requirements for collecting GIC modeling data and conducting thermal impact assessments, taking away the uncertainty associated with the impact of space weather and helping avoid potentially devastating consequences for the power grid and customers."

For more information on Doble's Geomagnetic Disturbance Risk Mitigation Services, including timetables and additional resources, please visit <http://www.doble.com/gmd>.

About Doble Engineering Company
Now in 110 countries, Doble Engineering Company has been helping clients in the electric power industry improve operations and optimize system performance for nearly a century. Doble offers diagnostic instruments, services, and the world's premier library of statistically significant apparatus test results for the benefit of energy generation, transmission, delivery companies and industrial power users worldwide. Doble is part of the Utility Solutions Group of ESCO Technologies Inc. (NYSE: ESE), St. Louis. For more information, visit: www.doble.com

**SUNGROW PRESENTS
1500V PV INVERTERS
AND ESS AT
INTERSOLAR EUROPE
2017**

Sungrow, the global leading PV inverter system solution supplier, presents 1500V string and central PV inverters as well as utility scale ESS at the Intersolar

Europe 2017 in Munich, Germany. The SG125HV, the world's most powerful 1500Vdc string inverter, features a high capacity of 125kW. Also, it is proved to work stably in full power operation without derating at 50 degrees Celsius, maximizing the return on investment for project owners. This 1500Vdc string inverter enables up to 5 MW power block design. As a turnkey station for 1500Vdc systems, the central inverter SG3000HV-MV features its integration of the inverter, the transformer and the switchgear, based on its containerized design of 20-foot, saving costs of transportation and installation. Its maximum inverter efficiency is able to reach up to 99%.

Committed towards providing integrated energy storage system solutions for residential, C&I and utility scale applications, Sungrow showcases an ESS which consists of the high voltage SC1000HV storage inverter, the latest battery pack, and EMS. This system complies with UL and TUV standards and its battery is supplied by the Sungrow-Samsung SDI joint venture. Thanks to its container design, the ESS can be flexibly configured at customers' request as well as easily transported to site and maintained. The maximum charge/discharge cycling efficiency can reach up to 96.5% and the maximum capacity for the 40-foot battery container is 4.8MWh. This system can be applied to frequency-modulation and peak-shaving uses. Sungrow's ESS has been enjoying a good reputation in the European market.

In addition, Sungrow showcases residential storage inverter SH4K6 plus battery, residential PV inverters such as SG2K5-S and commercial PV inverters like SG80KTL.

"Sungrow is committed to technical innovation which drives our rapid growth. We continue to offer better products and services to customers all over the world", said Professor Renxian Cao, president of Sungrow.

About Sungrow
Sungrow is a global leading PV inverter system solution supplier with over 31GW installed worldwide as of December 2016. Founded in 1997 by University Professor Renxian Cao, Sungrow is a global leader in research and development in solar inverters, with numerous patents and a broad product portfolio offering PV inverter systems as well

as energy storage systems for utility-scale, commercial, and residential applications. With a 20-year track record of growth and success, Sungrow's products are available in over 50 countries, maintaining a market share of around 25% in Germany and over 15% globally. Learn more about Sungrow by visiting: <http://www.sungrowpower.com>

payable on June 30, 2017 will be designated as an "eligible dividend" for Canadian income tax purposes pursuant to subsection 89(14) of the Income Tax Act (Canada).

About Pure Technologies Ltd.

Pure Technologies Ltd. is an international asset management, technology and services company which has developed patented technologies for inspection, monitoring and management of critical infrastructure around the world. Pure's business model incorporates four distinct but complementary business streams:

Sales of proprietary monitoring technologies for pipelines, bridges and structures;

Recurring revenue from data analysis, site maintenance, and from technology licensing;

Premium technical services including pipeline inspection, leak detection and condition assessment;

Specialized engineering services in areas related to asset management, primarily in the area of pipeline condition assessment for water and wastewater infrastructure.

PAINTED PONY ANNOUNCES PARTICIPATION IN THE RBC CAPITAL MARKETS GLOBAL ENERGY & POWER CONFERENCE

Painted Pony Energy Ltd. ("Painted Pony" or the "Corporation") (TSX: PONY) is pleased to announce participation in the RBC Capital Markets Global Energy & Power Conference taking place at the The Ritz-Carlton Battery Park New York located at 2 West Street in New York City, New York on Wednesday, June 7, 2017.

Painted Pony will be undertaking a series of meetings with institutional investors while at this conference. Interested parties are invited to view the Corporation's investor presentation on Painted Pony's website, www.paintedpony.ca

ABOUT PAINTED PONY

Painted Pony is a publicly-traded natural gas company based in Western Canada. The Corporation is primarily focused on the development of natural gas and natural gas liquids from the Montney formation in northeast British Columbia. Painted Pony's common shares trade on the TSX under the symbol "PONY".

SOURCE Painted Pony Energy Ltd.

ENERGY COUNCIL OF CANADA ANNOUNCES 2017 ENERGY PERSON OF THE YEAR

The Energy Council of Canada is pleased to announce that the 2017 recipient of the Canadian Energy Person of the Year Award is Al Monaco, President and CEO of Enbridge.

"We are happy to once again recognize a truly deserving individual," said Colin Andersen, chair of the Energy Council of Canada. "Mr. Monaco joins 17 other outstanding Canadians that the Energy Council has honoured. As the head of the largest energy infrastructure company in North America, he is helping not only to deliver vital energy to North Americans, but also contributing to the conversation on the future of energy in both Canada and the United States."

"This is a tremendous honour and one that reflects the efforts of the 15,000 members of the Enbridge team across North America in safely and reliably delivering the energy that we rely on in our daily lives and that drives our economy," said Mr. Monaco. "I'm privileged to join previous recipients, all of whom have contributed to the development of our world class Canadian energy industry."

Graham Campbell, President of the Energy Council of Canada offered further congratulations: "Mr. Monaco is being recognized for his leadership role in the recent merger between Enbridge and Spectra Energy, as well as helping to shape the public conversation around striking the balance between meeting our collective need for affordable energy while making the transition to a lower-carbon future."

The Canadian Energy Person of the Year Award was established by the Energy Council of Canada in 2001 to recognize and pay tribute to a Canadian energy leader who has made a significant impact at national and international levels within the energy sector.

Nominations are based upon the nominee's remarkable accomplishments in the business or public sectors and the community at large. A foremost characteristic of the nominee is their strong

sense of social responsibility and their commitment to give back to the community. Their forward thinking and innovative spirit enable these leaders to promote, inform and contribute to the Canadian energy sector. These distinguished individuals play an ongoing role supporting the aims and activities of the Energy Council of Canada.

The 2017 Award Ceremony will be held on November 16 at the InterContinental Toronto Centre.

The Energy Council is Canada's national energy association made up 74 member organizations representing all forms of energy, the federal and provincial governments, all major energy industry associations, and companies providing legal and business services to the energy industry. Its events and activities can be found at www.energy.ca

KEYERA SANCTIONS WAPITI NATURAL GAS GATHERING & PROCESSING COMPLEX

Keyera Corp. (TSX:KEY) ("Keyera") today announced the sanctioning of the first phase of its natural gas gathering and processing complex in the Wapiti area south of Grand Prairie, Alberta (the "Project"). The sanctioned portion of the Project is supported by agreements with its primary customer, which include an area dedication and take-or-pay commitments under a long-term gas handling agreement.

The first phase of the Project

includes a 150 million cubic feet per day sour gas processing plant with acid gas injection capabilities and 25,000 barrels per day of condensate processing facilities, as well as a gathering pipeline system and field compressor stations. Based on the proposed construction schedule, operations are targeted to start up in mid-2019. Phase one is estimated at \$470 million as it includes the build-out of certain infrastructure sufficient to support both phases. As a result of this decision, Keyera now expects to invest growth capital of between \$800 million and \$900 million in 2017.

Keyera is actively negotiating with several other producers in the area to nominate additional volumes and permit sanctioning of the second phase of the Project. Phase two would add an additional 150 million cubic feet per day of sour gas processing capacity and extend the gathering system at an incremental cost of approximately \$155 million. The total cost of the two-phased Project is expected to be approximately \$625 million. Additional third parties may require incremental gathering systems to be built.

"Keyera is very pleased to have reached an agreement with its primary customer to begin constructing phase one of this Project in the liquids-rich Montney," said Bradley Lock, Keyera's Senior Vice President of Gathering and Processing. "This Project, along with our Wapiti pipeline and Simonette gas plant, increases our presence in one of the most exciting developments in the Western Canada Sedimentary Basin. We look forward to working with area producers and stakeholders to develop this infrastructure in an environmentally and financially responsible manner."

About Keyera

Keyera Corp. (TSX:KEY) operates one of the largest midstream energy

INGRAM-MALO
TECHNOLOGY CORPORATION

780 497-7779
13727 93 st Edmonton alberta T5E 5V6

companies in Canada, providing essential services to oil and gas producers in the Western Canada Sedimentary Basin. Its predominantly fee-for-service based business consists of natural gas gathering and processing, natural gas liquids processing, transportation, storage, marketing, iso-octane production and sales, and an industry-leading condensate system in the Edmonton/Fort Saskatchewan area of Alberta. Keyera strives to provide high quality, value-added services to its customers across North America and is committed to conducting its business ethically, safely and in an environmentally and financially responsible manner.

**NO DRY HOLES:
NEW PETROLITHIUM
METHOD MITIGATES
DRILLING RISK FOR
O&G PRODUCERS**

A newly released independent engineering report from SigmaCubed Engineering detailing production rates in Utah's Lisbon Valley. The study is examining what could mark an evolution in the oil and gas industry: Lithium from oil wells.

Commissioned by MGX Minerals [OTC:MGXMF] [CSE: XMG] [FKT: 1MG], the report isn't solely measuring oil and gas production rates. In fact, the report is zeroed in on barrels of water per day ("BWPD").

The water in question is MGX's ace in the hole, as the company owns a proprietary technology dubbed "Petrolithium™," which as it sounds, derives the valuable mineral lithium from the excess brine water produced from conventional oil and gas wells.

By targeting brine-laden oilfields, MGX intends to hedge its drilling risks by deriving value not only from oil and gas, as well as lithium, which has been a sizzling commodity for the last couple of years. The idea is that no matter what petroleum production each well yields, there will always be lithium to produce regardless of the hydrocarbons. In essence, it eliminates the risk of a dry hole, as every well will produce brine water, whether there's oil or not.

UTAH PETROLITHIUM

The proprietary engineering report has zeroed in on various wellbore configurations, designed to optimize hydrocarbon-bearing oil and gas, and mineral-bearing brine production from traditional wells.

These configurations also included 1500', 3000', and 5000' leg horizontal wells, all of which could be in play for MGX as it embarks on bringing its petrolithium methods into the USA, after completing testing on brines in Canada's Alberta oilfields.

MGX controls 110,000 acres of oil and gas leases that are currently being unitized, as well as an additional 118,000 acres of largely overlying mineral claims within the Paradox Basin, and near the Lisbon Valley oilfield located 40 miles southeast of Moab, Utah.

The region was specifically selected for the rollout of the petrolithium program due to its high lithium-brine yields.

Brine content in the Lisbon Valley oilfield has been historically recorded as high as 730 ppm lithium, while the USGS has noted the Paradox Basin as having one of the largest undeveloped oil and gas fields in the United States.

Including the company's portfolio in Canada, MGX has acquired more than 1.7 million acres of brine-bearing formations to date.

Combining the value of oil and gas, and also lithium, makes the entire project more enticing to MGX and its investors who firmly believe in the future of petrolithium.

In preparation of drilling and production, MGX has engaged the internationally recognized Ryder Scott Company to prepare an independent resource evaluation for oil, gas, and water at the Lisbon Valley, Utah Petrolithium project. The final report is expected within the next 30 days.

LITHIUM EXTRACTION

Since early in 2016, MGX has had a major focus on this revolutionary lithium-extraction method.

Unlike the two main current lithium production methods, petrolithium comes with the advantages of speed, and expansiveness.

The world's most prominent lithium production method is that of solar evaporation. While the method looks to shortcut energy costs on removing the water from lithium-bearing brines by utilizing massive ponds set outside under the sun, the method takes upwards of 18 months to produce lithium, and can have mineral losses as high as 60%.

What MGX's petrolithium method proposes is a turnaround time of less than a day, and with near 100% mineral retention.

MGX is already currently manufacturing small commercial plants capable of handling 750 BWPD for rapid extraction of lithium and other valuable minerals from the brine.

Once implemented, the clean-tech process is designed to separate minerals, heavy metals, as well as hydrocarbons from what was once considered wastewater brines

pumped to the surface during traditional oil and gas operations.

Since filing an extensive and comprehensive US Provisional Patent for a modern industrial process specifically designed for highly-mineralized oilfield brines to concentrate lithium and other valuable minerals, MGX is setting itself up to possibly make a major impact for oil producers across North America.

Water handling has become a major cost factor for producers in every state and province in production, and for MGX to offer the ability to derive value from the water before it's injected or disposed of could be one of the biggest game changers

the industry has seen in decades.

MGX has already received third-party verification on its rapid lithium extraction process from the Saskatchewan Resources Council in Canada. It works.

Now as the company and its partners implement further optimization on the process, all signs point to a impactful petrolithium rollout in 2017.
