NEB RELEASES PRE-CONSTRUCTION AUDIT REPORT OF TRANS MOUNTAIN AND CORRECTIVE ACTION PLAN

The National Energy Board (NEB) today released its pre-construction audit of Trans Mountain Pipeline ULC (Trans Mountain). The audit evaluated Trans Mountain's preparedness to manage construction of its Trans Mountain Expansion Project in a way that assures worker safety and prevents incidents.

The NEB concluded that Trans Mountain had not yet established, at the time of the audit, all of the necessary oversight measures to manage construction-related safety and environmental protection for the construction of the project.

The company has filed its corrective action plan (CAP) and it has been approved by the NEB. As a result, the company can proceed with its construction where all requirements have been met. On an ongoing basis, the NEB reviews all compliance activities and has the authority to stop work if compliance is not being

maintained and to ensure safety and protection of the environment.

The NEB will monitor Trans Mountain's implementation of the CAP, and verify the effectiveness of the company's management system through targeted compliance verification activities as a part of its ongoing regulatory oversight of the project.

The pre-construction audit involved two months of document review and on-site activities, including extensive interviews with company employees and review of internal documents that describe company procedures, training materials, and staff responsibilities.

Quick facts:

The NEB maintains a proactive approach to safety and incident prevention and we take all available actions to protect Canadians and the environment.

The NEB reviews the state of all compliances activities on an ongoing basis and has the authority to stop work if compliance is not being maintained.

The Federal Government approved the Project last November, following a NEB recommendation in May 2016 that the Project be approved subject to 157 conditions.

The fact-gathering portion of the pre-construction audit occurred between April 13 – June 14, 2017 in accordance with subsection 49(3) of the National Energy Board Act (NEB Act).

During the audit, the NEB assessed whether the company's documentation, processes and activities complied with legal and other requirements under the NEB's authority relating to the NEB Act, the National Energy Board Onshore Pipeline Regulations (OPR), any conditions contained within applicable certificates or orders issued by the NEB and any requirements of applicable NEB safety advisories.

The NEB reviewed 37 items in the audit. Of those, there were 11 in which the NEB did not identify compliance issues; 15 were found to be non-compliant; and 10 others were not assessed because the process or activities were not yet required at the time of the audit. One other item was not assessed because it was being evaluated through other NEB compliance verification activities.

The CAP addresses all non-compliances and the NEB will continue to review that CAP to ensure compliance.

For all items that were not assessed

in this audit, the company must have all required practices in place in order to proceed with construction. The NEB, as part of its oversight, will be assessing those areas using other compliance verification activities.

Quote:

"This pre-construction audit is one of our proactive tools for regulatory oversight for the NEB. This is all about prevention and we believe that significant incidents can be avoided in the future by ensuring companies have the proper systems and processes in place even before they begin construction."

- Peter Watson, Chair & CEO, National Energy Board.

NEW DRILL RIG OPERATOR PROGRAM LAUNCHED AT NAIT

The two-year program – the first of its kind in North America – will start in January, 2018.

EDMONTON, Sept. 14, 2017 / CNW/ - NAIT is launching the first two-year training program for foundation drill rig operators in North America, starting in January, 2018.

The program was developed by NAIT at the request of the industry association in Western Canada, which provided about \$480,000 in funding. A task force of industry members worked with NAIT teaching specialists to build the drill rig operator program.

It will include nine online courses in areas such as operations, safety, mechanics and blueprint reading, as well as 1,500 hours of on-the-job experience.

QUICK FACTS

There is currently no formal training or certification required for drill rig operators in Western Canada.

NAIT's drill rig operator program will provide the skills and knowledge required for the safe operation of foundation drill rigs, used in the construction industry.

There are approximately 400 drill rig operators in Western Canada

Q U O T E S

Malcolm Haines, Dean, School of Skilled Trades at NAIT

"As a polytechnic, we are committed to supporting industry with hands-on learning. We're proud to be working with the ADSC to promote a more productive and safer work environment in this sector."

Kevin Sharp, past-president, Western Canadian Chapter of the Association of Drilled Shaft Contractors (ADSC)

"My uncle was seriously hurt in a drill rig accident. I want to make sure I leave this industry better than I found it, and proper training is a big part of that. This program will increase safety and understanding among drill rig operators."

GOVERNMENT OF CANADA INVESTS \$950,000 IN NEW CARBON CAPTURE TECHNOLOGY IN RICHMOND, B.C., LABORATORY

Supporting clean technology will create good, middle-class jobs, improve the environmental performance of Canada's oil and gas sector and help address climate change.

On behalf of Canada's Minister of Natural Resources, the Honourable Jim Carr, Member of Parliament Joe Peschisolido today announced that the Government of Canada is investing \$950,000 in state-of-the-art technology that will help turn carbon emissions into useful, everyday products such as building materials, alternative fuels and consumer goods.

The investment enables the Carbon Capture and Conversion Institute (CCCI) in Richmond, B.C., to design, acquire and install equipment to be used for carbon capture and turning carbon dioxide emissions into consumer-friendly products.

Carbon capture and utilization technology creates new products and business revenue stream opportunities while improving our environmental performance, creating jobs and driving clean growth in the process.

The new, specialized research equipment will also allow researchers from industry, government and academic institutions to collaborate and test innovative carbon use technologies more rapidly and cost-effectively.

This investment in the Richmond facility complements another announced last spring in Calgary

to help fund the Alberta Carbon Conversion Technology Centre, capable of testing carbon conversion at near-industrial scale. Together, the two test centres will provide a full spectrum of research and development solutions for carbon capture, utilization and storage development, and test facilities for early- and late -stage projects.

The funding announcement was made during the official opening celebration of BC Research Inc.'s Technology Commercialization and Innovation Centre, where the CCCI's new pilot laboratory is located.

Q u o t e s

"By re-imagining carbon, we can create new industries, good jobs and a cleaner energy future. That's why our government is supporting innovative research across the country. This includes a \$950,000-investment in state-of-the-art equipment and research that could help turn carbon emissions into useful, everyday products."

Joe Peschisolido
Member of Parliament for
Steveston-Richmond East

"This strategic investment from Natural Resources Canada allowed the Carbon Capture and Conversion Institute to purchase state-of-the-art process equipment and analytical instruments necessary for clean technology development. We are now able to compete on the world stage and are attracting industry, academic and government developers from across Canada and abroad."

Goran Vljajnic
Executive Director, Carbon
Capture and Conversion Institute

"BC Research has always believed in the value to Canada of being at the forefront of greenhouse gas mitigation and sustainable development. We became CMC Research Institutes' partner in promoting and supporting this concept from its inception, and we are committed to its future success."

Hassan Hamsa
President, BC Research

**CONNACHER
ANNOUNCES
APPOINTMENT OF CFO**

Connacher Oil and Gas Limited ("Connacher" or the "Company") today announced that Jeff Beeston has been appointed Chief Financial Officer of Connacher. Mr. Beeston is a Chartered Accountant with over 16 years of experience. Mr.

Beeston has been Vice President of Finance and Interim Chief Financial Officer at Connacher since November 2015 and prior to that was Manager, Finance at Connacher since November 2010. Prior to joining Connacher, Mr. Beeston was Manager, Taxation at an oil and gas producer and Mr. Beeston also previously worked for a big four accounting firm. Mr. Beeston holds a Bachelor of Commerce from the University of Alberta.

About Connacher

Connacher is a Calgary-based in situ oil sands developer, producer, and marketer of bitumen. The Company holds a 100 per cent interest in approximately 447 million barrels of proved and probable bitumen reserves and operates two steam-assisted gravity drainage facilities located on the Company's Great Divide oil sands leases near Fort McMurray, Alberta.

**TRINA SOLAR RATED
TOP BANKABLE
MODULE SUPPLIER BY
BLOOMBERG**

Trina Solar Limited ("Trina Solar" or the "company"), a global leader in photovoltaic ("PV") modules, solutions, and services, has received a top rating in the latest module bankability report, published by Bloomberg New Energy Finance (BNEF). After having obtained the top spot among all its industry peers in the previous 2016 report, Trina Solar has now once again been rated bankable by 100% of the banks, EPCs, consultants and industry experts participating in the BNEF survey.

For its global module bankability report, Bloomberg New Energy Finance asked banks, EPCs, independent power producers and independent technical due diligence firms which PV module brands they considered bankable. Quoting from BNEF's definition, 'bankable' means the willingness of a bank to provide a non-recourse loan for a project that uses a specific PV module brand. Banks typically decide whether to make a loan to a PV project if they feel comfortable with the product quality of modules and if the manufacturer is financially healthy, so that it can honor the product warranty. Respondents to this latest survey hold approximately 15GW of financed or owned capacity in PV projects, and more than 100GW under inspection by technical consulting companies.

"This outstanding result confirms

Trina Solar's permanent endeavor in the fields of product quality and reliability, top performance, innovation and solid financial management," said Rongfang Yin, Vice President of Global Sales and Marketing at Trina Solar. "We are very proud to be holding the top spot in this renowned BNEF industry report, especially because this rating has come from banks, investors and other parties deeply involved in PV project financing." Rongfang Yin continued, "It is reassuring to see that consistency pays off in the long run, creating trust in Trina Solar and leaving some premium-brand competitors behind in terms of bankability rating."

Reflecting the confidence in Trina Solar's bankability, the latest BNEF report also reveals that Trina Solar holds the largest volume in debt-financed projects among all c-Si module manufacturers, as tracked by the BNEF desktop, with approximately 3GW of its modules installed in such PV power plants around the globe.

About Trina Solar Limited

Trina Solar Limited is a global leader in solar photovoltaic modules, solutions and services. Founded in 1997 as a PV system integrator, Trina Solar today drives smart energy together with installers, distributors, utilities and developers worldwide. For more information, please visit www.trinasolar.com. E-mail: press@trinasolar.com

**HYDRO OTTAWA
EMPLOYEES TO UNITED
STATES TO HELP
AFTER HURRICANE**

A group of 25 Hydro Ottawa employees are heading towards the southern United States today to assist with power restoration after Hurricanes Irma and Harvey devastated many communities. The team of skilled power line maintainers will assist in restoring power after high winds and flooding has left many in the dark.

Quick Facts

In 2012, Hydro Ottawa dispatched restoration crews to Connecticut and New Jersey during the aftermath of Hurricane Sandy. It has also sent employees on numerous occasions to help Canadian utilities affected by ice storms.

Hydro Ottawa is a member of the North Atlantic Mutual Assistance Group (NAMAG). Made up of 29 utilities from across north-east Canada and the United States, NAMAG members agree to deliver not-for-profit assistance during times of crisis.

Designed to increase coordination of resources and support, NAMAG empowers participating utilities to quickly action mutual assistance plans to restore power whenever and wherever assistance is needed. NAMAG utilities represent approximately 36 million customers.

LABORATORY SERVICES

Skystone's state of the art material testing laboratory has been designed to meet the needs of the oil and gas industry. Our engineers have performed thousands of investigations to determine causes of component failures and to prevent future incidents.

The Skystone laboratory can provide services including:

- Failure analyses (pipelines, pressure vessels, downhole equipment)
- Cut-out evaluations
- Fitness-for service assessments
- Finite elemental analyses (FEA) and design verification
- Sweet to sour conversions
- Material testing and selection
